1.Create a Master-Detail Relationship between two Custom objects and also create a Roll Up Summary Field to Calculate total number of records.

Solution:

Step 1: Create Custom Objects

Assuming you have two custom objects, let's call them "College_C" and "C Department_C". If you haven't already created these objects, you can do so by going to Setup > Object Manager > Create > Custom Object.

The screenshot shows the Salesforce Setup interface with the following details:

- Header:** Includes the Salesforce logo, a search bar labeled "Search Setup", and various navigation icons.
- Breadcrumbs:** Shows "Setup" > "Object Manager".
- Section:** "New Custom Object" under "SETUP".
- Message Bar:** A yellow bar at the top states: "Permissions for this object are disabled for all profiles by default. You can enable object permissions in permission sets or by editing custom profiles. [Tell me more!](#) [Don't show this message again](#)".
- Custom Object Definition Edit:** A form with tabs "Save", "Save & New", and "Cancel".
- Custom Object Information:**
 - The singular and plural labels are used in tabs, page layouts, and reports.
 - Label:** college (Example: Account)
 - Plural Label:** colleges (Example: Accounts)
 - Starts with vowel sound:**
- Object Name:** college (Example: Account)
- Description:** (Large text area)
- Context-Sensitive Help Setting:**
 - Open the standard Salesforce.com Help & Training window
 - Open a window using a Visualforce page
- Content Name:** (dropdown menu) -None-
- Enter Record Name Label and Format:**
 - The Record Name appears in page layouts, key lists, related lists, lookups, and search results. For example, the Record Name for Account is "Account Name" and for Case it is "Case Number". Note that the Record Name field is always called "Name" when referenced via the API.
 - Record Name:** college Name (Example: Account Name)
 - Data Type:** Text
- Optional Features:**
 - Allow Reports
 - Allow Activities
 - Track Field History
 - Allow in Chatter Groups
 - Enable Licensing
- Object Classification:**
 - When these settings are enabled, this object is classified as an Enterprise Application object. When these settings are disabled, this object is classified as a Light Application object. [Learn more](#).
 - Allow Sharing
 - Allow Bulk API Access
 - Allow Streaming API Access
- Deployment Status:**
 - In Development
 - Deployed
- Search Status:**
 - When this setting is enabled, your users can find records of this object type when they search. [Learn more](#).
 - Allow Search
- Object Creation Options (Available only when custom object is first created):**
 - Add Notes and Attachments related list to default page layout
 - Launch New Custom Tab Wizard after saving this custom object

Second custom objects, let's call them

The 'Custom Object Definition Edit' page is displayed, with the 'Custom Object Information' section containing fields for Label ('department'), Plural Label ('departments'), and Description. The 'Record Name' field is set to 'Department Name' with a Data Type of 'Text'. Under 'Optional Features', 'Allow Reports' and 'Allow Activities' are checked. This screenshot shows the Salesforce Setup interface. The left sidebar lists various categories like 'Users', 'Feature Settings', 'Service', etc. The main content area is titled 'Permission Sets' under the 'SETUP' section. It displays a table of existing permission sets, each with a checkbox for 'Action', a link for 'Permission Set Label', a description, and a 'License' column. The table includes rows for 'Access_to_activity', 'Buyer', 'Buyer Manager', 'CRM User', 'Commerce Admin', 'Contact Center Admin', 'Contact Center Agent', 'Contact Center Supervisor', 'Experience_Profile_Manager', 'Facility_Manager', 'FieldServiceMobileStandardPermSet', 'Merchandiser', 'Order_Management_Agent', 'Order_Management_Operations_Manager', and 'Order_Management_Shopper'. Navigation links at the bottom allow for page navigation and selection.

Step 2:

Permission Sets:

- Create two permission sets, one for User A and one for User B.

Object-Level Security:

- In each profile and permission set, set the object-level security for the Account object to "Read" to ensure that both User A and User B can view Account records.

Record-Level Security:

- Implement record-level security using Criteria-Based Sharing Rules.
- Create a sharing rule that shares Account records owned by User A with User A and records owned by User B with user B.
- For the sharing rule criteria, specify that records owned by User A are shared with user

A, and records owned by User B are shared with User B.

Ownership:

- Ensure that the Account records are owned by the respective users, with User A owning their records and User B owning their records.

Organization-Wide Defaults:

- Set the organization-wide defaults for the Account object to "Private" to ensure that records are private by default.

Testing:

- Test the setup by logging in as User A and User B separately to verify that they cannot access each other's records.
